

TC-99M GENERATOR PRODUCTION UPDATE

14 September 2018

ANSTO has implemented a series of new production quality and safety improvements since the mechanical issue with a conveyer belt on 22 June 2018.

ANSTO experienced a set back with our validation process earlier in the week and has now taken steps to overcome this. We directly informed our customers and members of the nuclear medicine community about this matter late on Wednesday and each of our customers are now receiving personalised updates prior to their next shipment.

The generators produced at ANSTO on Wednesday are now scheduled for distribution on Sunday and ANSTO has scheduled a further production run on Sunday for distribution of ANSTO generators on Monday.

In addition, ANSTO will continue to import and distribute generators from the US to supplement local supply as we work towards full local generator production next month.

We apologise for the impact that the interruption to our local supply of generators has had and we are working to restoring full local production as soon as possible.

Should you have any questions, please contact us directly on 1800 251 572
