Customer Update re: Lu-177

At the end of last week during the dispensing of Lu-177 there was an issue with the vial capper. The aluminium caps were unable to be crimped properly, which is required to maintain the integrity of the seal of the vial. As a result, the batch was unable to be released for despatch this week.

ANSTO has now resolved the issue and is completing the required validation processes. Unfortunately we are unable to source product from our back up supplier iTG for the week commencing 22 April. We will be able to confirm availability of ANSTO Lutetium-177 on Tuesday 23 April once we receive pending QC results. ANSTO will be placing orders with iTG today for supply the week commencing 29 April.

All impacted customers have been informed of this issue and we will keep customers up to date should there be any changes to this schedule.

If you have any questions, please contact ANSTO directly on 1800 251 572
